

Slimer Gets Blasted!

Laurel Barrett

Motivation

My brothers and I are huge fans of the Ghostbusters franchise, with all three of us dressing up as different characters on multiple Halloweens. I thought it would be fun to bring one of our favorite characters to life as a toy or Halloween decoration. (And I'll give it to my little brother when it's done!)

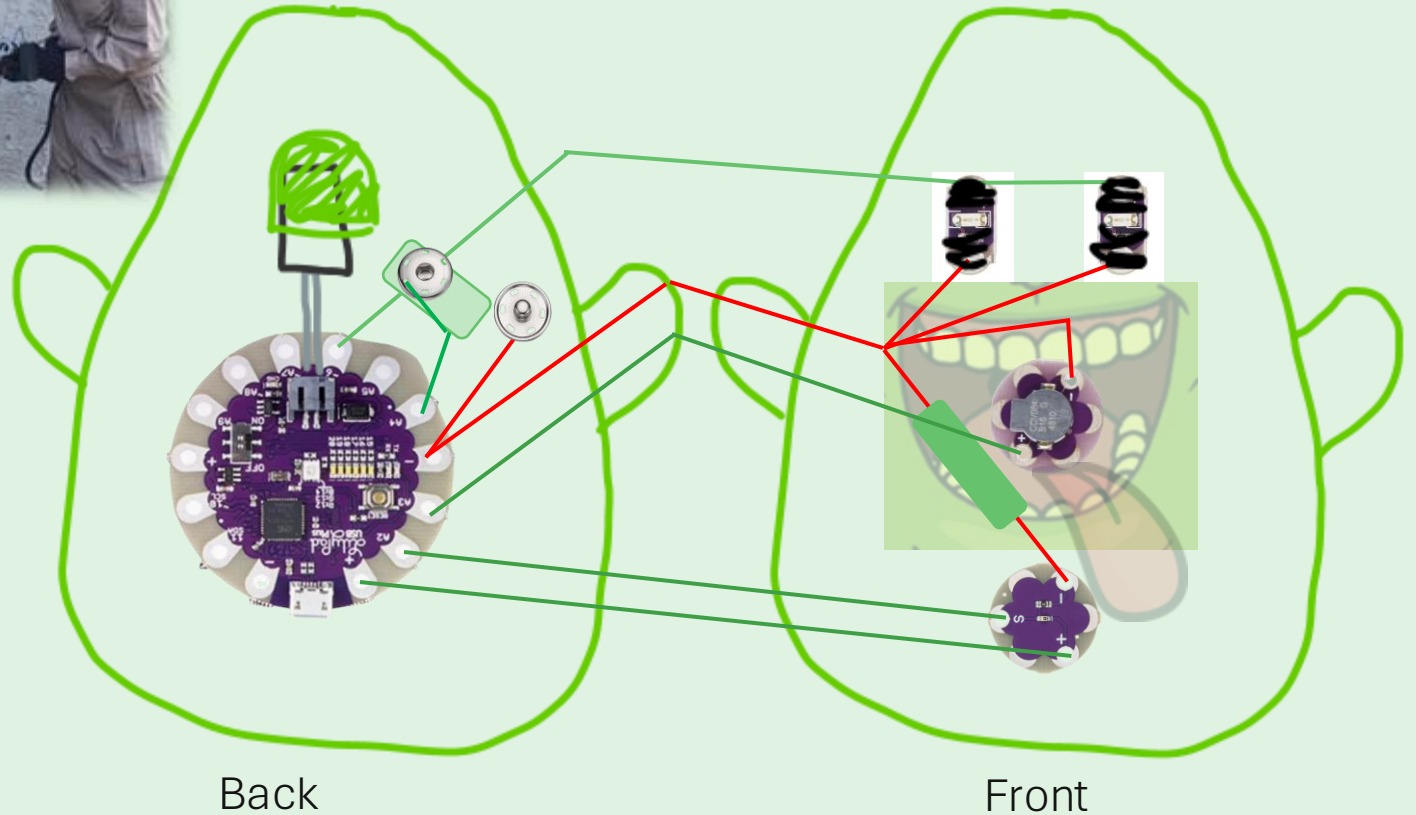

Materials List

Orange = to buy

- 1 LilyPad Arduino Protosnap
- 1 Arduino Battery
- 2 LilyPad LEDs, red (fade)
- 1 LilyPad Light Sensor
- 1 LilyPad Buzzer
- 2 Metal Snaps
- Conductive Thread
- Scissors and Needle
- Flashlight
- Stuffing (I can use socks if need be)
- 2x 8"x11" craft felt, light green
- 1x 8"x11" craft felt, red
- 1 skein (8.7 yd) black embroidery floss*
- 1 skein (8.7 yd) white embroidery floss*

I will create a Slimer plushy with a switch-controlled circuit using conductive thread that connects a snap switch, light sensor, buzzer, and two analog LEDs to the Arduino board. When the homemade snap switch is on and the bright light of the proton stream (flashlight) is detected, Slimer's red eye LEDs fade up in a loop, and he lets out a shriek of increasing frequency from his buzzer. I will sew the plush together using blanket stitch and embellish an open mouth and eyes on the front using satin stitch to insulate and cover the circuitry. A felt tongue will protrude. I will also attach a battery pocket on the back using running stitch.

*8.7 is the standard, but I won't need the full skeins, so if you're only able to find between 2-3 yards of each floss, that works!
